Do I Still Need to wear Gloves?

 **MADE IN
THE USA**

Unprotected skin

-  Moisture-robbing Irritants
-  Moisture

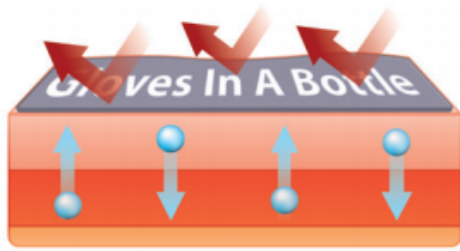

Exposure to the elements when in harsh weather or when cleaning, gardening, painting, working, skiing or fishing often strip the protective oils from the outer layer of skin. Household & workplace chemicals - even cosmetics & fragrances absorb into the skin causing dryness, irritation or worse.

If gloves are not used, it is far better to wear Gloves In A Bottle® than

#

Protected w/ Gloves In A Bottle®

nothing at all. Gloves In A Bottle® is not an alternative to proper safety protection but provides a secondary line of defense.

Gloves In A Bottle® bonds with the outer layer of skin cells turning them into what works like an invisible pair of gloves.

These “invisible gloves” combat problem skin by protecting from the elements which rob skin of moisture

and by retaining your own natural oils. This provides far better hydration than what is achievable with conventional “artificial” moisturizers.

“I am an avid crafter, painter and sewer always washing my hands. My fingers use to crack. Within 2 uses I found my hands stopped cracking and the skin was able to repair itself even though I was still washing frequently. This product is unbelievable! It is a must for skin exposed to anything irritating.”
