Unprotected skin

 Moisture-robbing Irritants
 Moisture

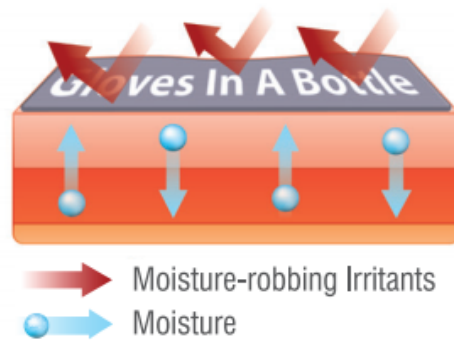

Have you ever started using a conventional lotion (artificial moisturizer) because you had dry skin, only to find that when you stopped using it your skin became even drier? Only natural moisture and oils below the outer skin layer can actually resolve a dry skin condition.

#

Unlike moisturizers, Gloves In A Bottle® bonds with the outer layer of skin cells, creating an “invisible shield”. This now-enhanced outer layer of skin protects from the elements that cause dryness and irritation while retaining natural moisture and oils to resolve dry, cracked & irritated skin from within.

Regular use of artificial moisturizers can create a dependence by sending the wrong message to the skin (that there is enough moisture present), causing the skin to produce less natural moisture, the only thing that is going to resolve dry skin problems. Shielding lotions can reverse this condition.

Protected w/ Gloves In A Bottle®

“What really works best for helping dry skin is your own natural oils. Gloves In A Bottle® helps take care of the skin in ways that medications can’t... It forms a natural invisible shield and your own natural oils are left there to do their job.”

Dr. Peter Helton,
Board Certified Dermatologist
